Hi,

I'm new to U++ trying to find "paths" under Windows.

This is my test code:

```
#include "stdio.h"
```

```
#include <windows.h>
```

```
#include <iostream>
```

```
#include "Shlwapi.h"
```

```
using namespace std;
```

```
int main(int argc, const char *argv[])
```

```
{
```

```
    // String for path name.
```

```
    char buffer_1[MAX_PATH] = "name_1\\name_2";
```

```
    char *lpStr1;
```

```
    lpStr1 = buffer_1;
```

```
    // String of what is being added.
```

```
    char buffer_2[ ] = "name_3";
```

```
    char *lpStr2;
```

```
    lpStr2 = buffer_2;
```

```
    cout << "The original path string is  " << lpStr1 << endl;
```

```
    cout << "The part to append to end is  " << lpStr2 << endl;
```

```
    bool ret = PathAppend(lpStr1,lpStr2);
```

```
    cout << "The appended path string is  " << lpStr1 << endl;
```

```
    return 0;
```

```
}
```

It gives the following error:

PathTest.cpp

PathTest: 1 file(s) built in (0:00.96), 967 msecs / file, duration = 983 msecs, parallelization 0%

Linking...

C:/upp/out/uppsrc/PathTest/MINGW.Debug.Debug_Full.Main.Sse2\ PathTest.o: In function
`main':

C:/upp/uppsrc/PathTest/PathTest.cpp:21: undefined reference to `_imp__PathAppendA@8'

collect2.exe: error: ld returned 1 exit status

Maybe this is something obvious yet I have not been able to get it...

Searching on the subject I found a post at StackOverflow which suggests that

"You need to add the shlwapi library for linking:

```
gcc -o test test.c -lshlwapi"
```

Thanks for any Path to the solution!!!

Rfdiaz

Hi,

You're right. You'll need shlwapi.

See [http://ultimatepp.org/app\\$ide\\$GettingStarted\\$en-us.html](http://ultimatepp.org/appideGettingStarted$en-us.html) (Search for "What is stored where ?") which explain how you add a lib.

Project->Package organizer..

In main area of window press right click. Select "New Libraries..". In "When" field add WIN32 and in next field add shlwapi

Andrei

Hello rfdiaz

Welcome to forum.

If you work in U++ you just need AppendFileName() function to append two paths.

If you also wants to browse through a folder, you can use this example:

```
String path = AppendFileName(dir, ".*")
FindFile ff(path);
while(ff) {
    String name = ff.GetName();
    String namePath = AppendFileName(dir, name);
    if (ff.IsFile())
        DoSomething(namePath);
    else if(ff.IsFolder())
        DoMore(path, name);
    ff.Next();
}
```

To create a new command line U++ project you have to open TheIDE, choose "New package" and choose this option:

CONSOLE_APP_MAIN is the main() of your program.
