How does one hide a row in an ArrayCtrl?

to create it hidden: (I often use this to store information)

```
headerctrl.AddColumn(some_identifier or just "").HeaderTab().Fixed(0);
```

To hide a visible Column later (0 is the number, can also be an identifier assigned during creation)

```
headerctrl.ColumnAt(0).HeaderTab().Fixed(0);
```

Edit: Oh, a row.... how did that turn into a column in my head...? hmmm :roll:

AFAIK, there is no easy way to do that unlike with GridCtrl. I'm personally doing this by using virtual ArrayCtrl. I implemented a tree-like grid on top of the ArrayCtrl this way.

OK, it really was missing, so:

```
class ArrayCtrl {  
....  
    Callback2<int, bool&> WhenLineVisible;  
    void ShowLine(int i, bool e);  
    void HideLine(int i) { ShowLine(i, false); }  
    bool IsLineVisible(int i) const;  
....  
};
```
