Subject: GridCtrl: How to display a menu on header right click?
Posted by rxantos on Mon, 02 Mar 2015 10:05:08 GMT

When using an ArrayCtrl, One could use.

HeaderObject().WhenBar = THISCALL(MyHeaderMenu);

To show a menu when right clicking on the header.

What would be the equivalent when using a GridCtrl?

There is WhenMenuBar for context menu and WhenToolBar for toolbar.
Inside your own menu builder you can use predefined grid menu functions like StdMenuBar, NavigatingBar etc.

How do you detect if the menu was activated in the header and not in another row?

I want to show a different menu on the header than for the items.

I want to show a different menu on the header than for the items.
In the menu builder check if the mouse position is less than fixed rows height (use GetFixedHeight() to get this value)

Thank you, sometimes one look for overcomplicated things and misses the simple solution.
