Are there any instructions fro building U++ from source on Windows ? I retrieved the latest source from the git repository but there are no instructions given at the top level on how to build Ultimate++ which I could see.

Hi eldiener,

If I remember correctly, the only reasonable way to build TheIDE on windows is to use TheIDE. It is litlle bit like the chiken/egg problem

You can get any of the nightly builds from here, point it to the sources you have from repository and build the package ide from uppsrc nest to get fresh TheIDE. From here on, you can always use your previous TheIDE to build a newer one after updating the repository.

Best regards,
Honza
