Hi,

Google has announced that Google Code is shutting down. Any thoughts on what is going to happen to the public U++ subversion mirror?

Honza

Maybe it's time to move on from subversion to git?
And mirror it to gitorious/github/bitbucket to offload the server.

I have set up a github mirror: https://github.com/ultimatepp/upp

see this thread for more info: http://www.ultimatepp.org/forums/index.php?t=msg&goto=43093&#msg_43093

The sync is currently run from my local machine, may be it is time to make
something more official ?

After considering all options, I think the best course of action is to move mirror to sourceforge.net.

GIT mirror is a nice addition though - I will gladly add needed crons and scripts to server(s).

Mirek

In light of the recent events of SourceForge employees hijacking the project download areas and adding adverts and adware onto Windows installers, I would think that this is a bad idea. If you're making the decision due to an affection with Subversion, that's not a sound decision, to be blunt.

You should use the best technical solution, and that's Mercurial or Git at this time. I'll have...issues and concerns...if you guys move it over to Source Forge (As an observation, prior to the incident, I'd probably have just grumbled and let it go without comment. Now, however...)

Right now I'm not using it extensively, but with the latest versions and the stuff showing up in the Bazaar that make it worth considering for app development...I'd hate to see the project make this sort of mistake right now.

Please calm down We are speaking about svn mirror here, nothing more...

Mirek
