
Subject: Interesting: with GTK backend, strtod does not work (correctly)

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
GUI_APP_MAIN
```

```
{  
    DDUMP(strtod("3.5", NULL));  
}
```

```
strtod("3.5", __null) = 3
```

Perhaps something that GTK does to locale is to blame, but strange anyway as I have en-us...

In any case, fix is simple: Use ScanDouble instead. But worth knowing anyway...
