Subject: IDE and the editor

I use JEdit to edit files. When I choose a package to open in the IDE it always opens at least one file in its editor.

Is there any way to close the editor portion of the IDE so it does not show a file opened in the editor ?

If there is no way to close all files in the editor, how do I tell the IDE to refresh its view of whatever file(s) it has opened if they are changed elsewhere (by JEdit for instance) ?

Hello Eldiener

No problem, TheIDE editor automatically updates an opened file when it is changed elsewhere.

To elaborate, file is always saved when other file is choosen, when compilation is invoked and even when Ide loses the focus.
