Hi,

I use guilock in my code, and it seems to hang in there.

How is that possible?

Is guilock safe? Can the library have some defects in connection with guilock or?

Update:

It does not seem to hang now.

Can I use the guilock in main thread safely?

A.

A.

It is possible, but it is as much likely that your code has some issue. Hard to say without knowing more.

I really would like to know more...

Mirek

There was unhandle exception within the guilock in side thread...  
I fixed that. Now I do not have the issue.  
Could that cause that?

It is not easy to say for sure because hanging did not happen predictably rather in random way..  
After the multithreaded application ran for a while.

Well, unfortunately, that is typical for MT code.... But yes, it could have caused the issue.
