Subject: How to get path separator depended on platform?
Posted by Klugier on Fri, 27 Mar 2015 22:29:12 GMT

Hello,

I would like to ask is there any official way to get path separator character on current platform in Upp Core library.

Pseudo code of function that I am looking for:

```
String DirSeparator() {
#if defined(PLATFORM_POSIX)
 return "/";
#elif defined(PLATFORM_WIN32) || defined(PLATFORM_WIN64)
 return "\\";
#endif
}
```

Sincerely,
Klugier

Hi,

in Core.h, there's these two macro:

```
 #define DIR_SEP  '/'
 #define DIR_SEPS "/"
```

Hello omari,

Thanks for answer! It works like I wanted.

Personally, I think that this macros should be documented somewhere...

Sincerely,
Klugier
