Latest SVN update.

While compiling uppsrc/ide
It compiles in debug mode.

but in release mode I get following error

It looks like it is Pre-compiled header file error.
TextDiffCtrl.pch file not created.

\uppsrc\TextDiffCtrl\DirDiff.cpp : fatal error C1083: Cannot open precompiled header file:
/out/uppsrc/TextDiffCtrl/MSC12.Force_Speed.Gui.Mt\TextDiffCtrl.pch': No such file or directory
DiffCtrl.cpp

When I un-checked the "Precompile header" in package organizer for

TextDiffCtrl/TextDiffCtrl.h

IDE is compiling in release mode.

I do have the same error for "GUI MT TEST_HIDPI" configuration.
Full rebuild with MSC12x64 gives no compiling errors but with following linking error:
"Export.obj : error LNK2011: precompiled object not linked in; image may not run"

Hopefully fixed.
