Hi,

I am on WIndows.

I tried to use httprequest with https url.
It looked simple, then it is not.

I added to core/ssl but it does not work.
Is plugin/sal missing from distribution?
Where should I get the missing libraries?
e.g libeay32MT ssleay32MT and other variants.

Do you have these libraries? What about 64 bit version?

Thanks.

A.

I think you need to install OpenSSL.
