Without using the mouse of course.

For example, if I wanted to start in the middle of the window.

I know the win32 way, but wonder what the u++ way would be.

Hello rxantos

The SysInfo way :) is `Mouse_SetPos(long xMove, long yMove, int64 windowId)`.

You can also click the mouse buttons and simulate the keyboard, and it works in Linux and Windows.

Thank you.

BTW:

Useful package.
