Hello,

when I started with U++ I was coming from a GUI in C where all the callbacks were visibile to all and I could draw "spaghetti" everywhere. In C++ the things are different and I had my bad moments of frustastion with the class and their callbacks. Thanks to Aris I overcame them. In my spare time I've written a short notes/tutorial about callback (see attached). Perhaps they can be useful for beginners like me.

You can use them as you want for any purpose you like. If you have comments and want to improve them you are welcome. There is space for improvements!

Very nice.

I have an idea - what about posting those tutorials on CodeProject?

"competition" does that:

[http://www.codeproject.com/library/vcf\\_helloworld2.asp](http://www.codeproject.com/library/vcf_helloworld2.asp)

I think this could be interesting for CodeProject readers as well.

Would you help, aris? (Like adding some foreword to the first tutorial and maybe fixing typos?).

Mirek

Sorry about not completely polished things in this tutorial. I've done only one 10 minutes revision... and preparing some SVG graphics for it. But I want to have our forums more "navigatable" etc. before bigger advertising and some summer interruptions with my internet access.

I see this is an old post, but when I found it, I was so glad someone had written a support document for callbacks. The problem is. I can not open the rar file. Downloaded it six times, tried to open it with 3 different RAR enabled applications and they all said it was unknown format or damaged.

Can anyone post a copy in doc,html, pdf or whatever is available?

Thanks, John

Hello,

I have no longer a copy. This post was on the older server and I am afraid now there is nothing attached.

Perhaps somebody else has a copy although I doubt.
