Subject: Windows 10 is coming; will you give it a try?

I reckon that all Window's users are aware of it (i.e. the possibility of installing Windows 10 for free); I am still pondering whether to install it or not.

I would like to ask you these questions:

1.- Will you give it a try?;

2.- Will TheIde work properly with Windows 10?. that's what matters me the most;

Cheers,

Javier

I will likely install by the end of august.

I do not expect problems with U++, only installation could get more warnings than today....

I already did. I installed ultimate++ 2015.2 version (that is portable, so just unzip it somewhere in your filesystem) with visual studio 2015. I had a minor problem due to the location of the MyApps directory: if I placed it outside the install directory I had some problems with the recognition of the libraries. Most of the problem came from the new c++ 11 compiler, but so far everything is fixed. To date (about a week since I installed win10) no problem at all with theide and the operating system. I do not manage big projects though.
