Hello,

I have just started to study SDL. I would like to implement some billiard game. I found nice tutorials here

<http://lazyfoo.net/tutorials/SDL/index.php>.

I began with SDL 2.0. Then I dreamed to use it with U++ and then found a SDLCtrl for free in Bazaar (thanks Koldo!).

Unfortunately it is based on 1.2. I wonder if there is some plan in future to move to 2.0 otherwise I'll continue to study 1.2.

Luigi

Hello Forlano

Thank you for your post. I did not remember I worked in this package some years ago.

I do not expect to work with it so it is open to you or anybody to update and improve it.
