On bigger projects, sometimes the intellisense cease to work.

Is there a file I could delete so that is rebuilt?

Hello rxantos,

By "intellisense" you mean new cpp parser? You can reparse your source files. You can do this by clicking on "Assist" menu bar option and then choosing "Reparse source files" entry.

Sincerely,
Klugier

Hi,

it is still in 'maturing' phase, but for me it generally works quite well. But that is more a reason to fix remaning issues fast to make it perfect... :)

Generally, there are 3 kinds of bugs:

- some specific code should parse, but it does not. That is general problem usually fixable pretty quick as soon as I have reproducible case - and this is usually easy to reproduce.

- rarely, but spotted is the the case when is some situation it stops working in some file. Pressing Ctrl+Space shows only global symbols, not symbols related of current class/namespace. Unfortunately, this is hard to reproduce, as in such case it usually resumes working a moment later, e.g. going to another file and back. Is this the case you have encountered?

- in the past, sometimes CodeBase got "leaking" and consumed much more memory than it should (it is about 100MB for IDE sources, it was getting to e.g. 500MB area). I am not sure that this error persists, have not met it for some time...

Specifying more details in bug reports about new C++ parser would be very helpful... :)

Mirek

Typing is still agonizingly slow..... on my core i-3 (version 9448)
My application is getting pretty damn large with 100+ source files.
That might be a factor...?
