I am using this for save confirmation:

```
int PromptSaveDontSaveCancel(const char *qtf) {  
    BeepQuestion();  
    return Prompt(callback(LaunchWebBrowser),  
                  Ctrl::GetAppName(), CtrlImg::question(), qtf, true,  
                  t_("&Save"), t_("&Don't Save"), t_("Cancel"), 0,  
                  CtrlImg::save(), NoButtonImage(), Null);  
}
```

I can't add it to my code base because the Prompt is not public. Could we either get this method added to headers and sources or have the Prompt made public?

Thanks!

Did both... Thanks.
