Subject: Failed to auto setup build method in 32bit Win 7 with VC2015

I successfully setup theide (automatically) on 64bit windows 8.1 after I installed vs2015 community and Windows 10 SDK.

But theide wouldn't create the MSC15 build method for me after same things have been done on 32bit windows 7.

Folders in C:\Program Files\Windows Kits are
8.0
10

What did I miss?

Thanks,

Lance

Frankly, never tested with Win7 32-bit... So it is good that you do...

Would it be possible to run dir /s on C:\Program Files\Windows Kits and c:/program files/microsoft visual studio 14.0/vc/bin and send the result (as file, zipped) here?

Mirek

Sorry, Mirek. I run win7 32bit in a virtual machine. It's been accidently corrupted. It will take some time to restore. I'll let you know when I have the requested content ready. Thanks!

Well, I have checked with genuine Win7 32-bits and everything seems OK. My first thought is that you did not have VC++ installed properly.

I have made screenshot of VS options required for U++.

You are correct. Unlike previous version VS 2015 minimal install give only gives you some web development tools. Once I selected the same options you have, it worked fine.

Thank you
