Subject: Options to switch off parts of Assist++

Setup/Settings/Assist now has options to enable/disable Assist++ features that could cause performance problems:

Automatic scans of source files - if active, ide automatically scans/updates info about all files. If off, you need to invoke Assist/Reparse all source files to get any assist action...

Automatic assist - if active, assist popup opens when '.', '->', ... is written in the text. If off, you can only get that popup by pressing Ctrl+Space

Rescan file when editing - when active, assist rescans current file while editing (after 1s of inactivity). If off, can be invoked through Assist menu/Rescan file.

All options are ON by default.

Thank you. A shortcut for "Rescan current file" would be handy with new features. I couldn't find it among ide shortcuts. I thought that ide menu and keyboard shortcuts are synchronized automatically.
