it seems it is compiled as 32 byte object.

bazaar/SysInfo\_demo\_gui is a test case.

Using MinGW TDM 64 bits, bazaar/SysInfo\_demo\_gui is compiled and run without problems.

MinGW TDM 32 complains, but about CtrlLib using stricmp().

:blush: yes, 64 bit work well.

the problem is with 32 bit, it is the problem reported in this thread :
