Good morning,

I would like the width of the columns of an array could change with the size of the array. For instance, one time the array has 3 columns and in other time the array has 5 columns. But, i want the first column has always 10% of the width of the array.

.ColumnWidths uses a string which gives fixed sizes. How could in have relative sizes?

Thanks a lot for tour help.

Best regards.

Actually, ColumnWidths (and numbers you write as the parameter of AddColumn) are always 'relative' (ratios). Yep, if you use Ctrl+Click trick to set ColumnWidths, values are in pixels, but that works as ratios too.

Mirek
