
Subject: XmlNode changes (warning: no exceptions anymore)

operator[](const char*) returns empty static (in theory, per thread) XmlNode instead of throwing the exception. (change forced by practice).

XmlNode now has GatherText, a simple solution for the common problem

<value>text value</value>

GatherText for "value" returns "text value".

Implemented as:

```
String XmlNode::GatherText() const
{
    String r;
    for(int i = 0; i < GetCount(); i++)
        if(node[i].IsText())
            r << node[i].GetText();
    return r;
}
```
