Subject: Empty Template vs CtrlLib application with main window

Hi everyone,
Just discovered U++ - I created an empty Package, and tried to get it to do some of the example programs, so make sure I knew what all the settings were doing and to help me understand how U++ does things.

Can somebody point me in the right direction to find where the templates, or what goes into them, so I can diff them with what's created by the empty template and figure out how to set it all up from scratch?

When I stopped using the Empty template, and started using "Basic CtrlLib application" for my package template, things worked great.

Thanks!

Hi analognoise!

Welcome to U++ forum

You can just search for *.upt files in uppsrc directory. Each file corresponds to single template, e.g. uppsrc/CtrlLib/Normal.upt is the Basic CtrlLib Application. They are quite easy to understand, but if you need it, there is a page describing the format (beware, it might be slightly outdated). Let us know if you have trouble to figure out something

Best regards,
Honza
