Subject: Application can't be started when the Assembly name has spaces in it

If I create an assembly with a name like "Just Bugfixes", then I can't debug or execute the application.
This has only been tested on Linux (linux Mint 17.3 kde) version 9448-trusty-amd64 (64 bit)(Gtk)

Hello Alboni,

I created "My Assembly" and create "Test" (Core package) and everything seems to working. Maybe I need more precise info. Can you post image of assembly set-up (Just double clicked on assembly name in package selector)? It would be nice to have your app name - dose it contains space?

* I tested on Kubuntu 14.04 (KDE desktop environment).

Sincerely,
Klugier
