Subject: GetRectInParentWindow for all backends

Hi Mirek,

Why GetRectInParentWindow is only available for X11 backend? Where there any technical problems with it or nobody requested it so far?
I ask because I have an application that uses two layouts (side by side) in one window and I need to know coordinates of a widget that is located in one of the layouts.
GetRectInParentWindow does exactly what I need, but it is defined only for X11.
