Hello, all!

TheIDE version 9466 (64 bit) (Gtk)
Rosa Linux Fresh R7

gcc - version 4.9.2_2014.08-2

When I install the Ultimate++ command make got the following warnings.
Development environment TheIDE still going. Every time you build the project received these linker warnings:

Linking...

```
/usr/bin/ld: skipping incompatible /usr/lib/libdl.so when searching for -ldl
/usr/bin/ld: skipping incompatible /usr/lib/libdl.so when searching for -ldl
/usr/bin/ld: skipping incompatible /usr/lib/libpthread.so when searching for -lpthread
/usr/bin/ld: skipping incompatible /usr/lib/libdl.so when searching for -ldl
/usr/bin/ld: skipping incompatible /usr/lib/librt.so when searching for -lrt
/usr/bin/ld: skipping incompatible /usr/lib/libstdc++.so when searching for -lstdc++
/usr/bin/ld: skipping incompatible /usr/lib/libm.so when searching for -lm
/usr/bin/ld: skipping incompatible /usr/lib/libgcc_s.so when searching for -lgcc_s
/usr/bin/ld: skipping incompatible /usr/lib/libc.so when searching for -lc
/usr/bin/ld: skipping incompatible /usr/lib/libgcc_s.so when searching for -lgcc_s
/home/navadvipa/upp.out/MyApps-bazaar/GCC.Debug.Debug_Full.G
ui.Shared/sanskrit_peregonka (22918600 B) linked in (0:10.91)
```

OK. (0:28.48)

And compiled programs are working well!
This is why it is so? Needs to be replaced gcc to a new version?

Thanks!

With best regards Navadvipa Chandra das.

Hello, all!

The answer is that with the system at the same time, there are versions of the same libraries for

i586 and x86_64 , and the scripts are written so that they are searched. Library unnecessary platform are discarded.

For example:

/usr/lib/libdl.so

/usr/lib64/libdl.so

With best regards Navadvipa Chandra das.
