Subject: upp-mingw-9671 with win\upp9628 SOLVED

I have recently been using win\upp9628

I just downloaded upp-mingw-9671

Now when I run either one it uses MSC 15.
How can I choose between the mingw or ms compiler?

What is 'with toolchain?

Quote:What is 'with toolchain?Now Windows users enjoy two downloads, one with just U++ and
TheIDE binaries and basic libraries, and the second one (toolchain) includes all MinGW.
The last one is ideal for users that do not have any compiler installed.

Thanks Koldo, I will download the latest 'with toolchain'

That should run on external media like a thumb drive and would be portable.
