My project worked long ago.
Then I updated U++ to 9818 on windows. When I built my project again with MinGW, it complained many errors. So I updated MinGW, including libc, etc.
It still complained C++11 not supported, so I had to add a `-std=c++11` option.
But it still complained `_hypot`, `PCONDITION_VARIABLE`, `CONDITION_VARIABLE` and `stricmp` not declared.

This is weird.

Are you using 'mingw' nightly build? ([http://www.ultimatepp.org/www\\$suppweb\\$nightly\\$en-us.html](http://www.ultimatepp.org/www$suppweb$nightly$en-us.html))

It comes with the latest mingw and autoseups itself...

Mirek

I got UPP 9843 nightly build without mingw and checked MINGW is everything up to date.
still failed to compile.
Then I installed VC 2015.
Now TheIDE does not detect either Mingw or VC2015 when I choose setup->Instant Setup.
If I manually set VC in setup->Legacy compiler automatic setup, which is 14 and I can set it to 12 only, numerous VC header files are not found and the directories are not in header paths in setup->Build methods.
stuck.

Then I installed VC 2015.
Now TheIDE does not detect either Mingw or VC2015 when I choose setup->Instant Setup.

I had similar problem with VS2015 detection when Windows SDK was not selected to install:

I had chosen to install Win10 SDK
