Is there a list of which libraries typical u++ binaries rely upon?  
I'm trying to make my program available to my customers as a .deb file containing the binary and some config files. I would like it to be easily installable. The only dependencies I can think of at the moment are mysql-client and libssl but I'm sure there might be more as a result of using u++

You can check libraries used by your program with ldd, but after that you have to check what packages contain needed libraries (packages.ubuntu.com, packages.debian.com).

```
$ ldd ./MyProgram
linux-vdso.so.1 => (0x00007ffc9e9f8000)
libX11.so.6 => /usr/lib/x86_64-linux-gnu/libX11.so.6 (0x00007fb9e9f9a000)

Hi Alboni,

If you're using debhelper, it can generate the dependencies for you via dh\_shlibdeps. You just have to add the shlibs:Depends variable to your debian/control, e.g.:Depends: \${shlibs:Depends}, \${misc:Depends}

And of course make sure that your debian/rules calls dh\_shlibdeps.

You can have a look at how it is done for theide here.

Best regards,  
Honza
