Subject: how to use the TcpSocket::Get?
Posted by akebee on Tue, 31 May 2016 05:05:01 GMT

in "Referenct"->"SocketServer" we see

String w = s.GetLine();

it works well, but i don`t only want to revieve one line from the socket client,
so i changed to

String w = s.Get(1024);

Perhaps you are in blocking mode and there is no more data?

Have you checked docs?
