I choose the sciter <http://sciter.com/> in my project to deal with html related work.
but i can not compli when i include the sciter headers:

```
#include "sciter-x.h" // sciter headers
```

```
e:\sdk\scater3\include\value.hpp(82) : error C2653: "aux": is not a class or namespace name -  
e:\sdk\scater3\include\value.hpp(82) : error C2653: "aux": is not a class or namespace name  
e:\sdk\scater3\include\value.hpp(82) : error C2061: syntax error identifier"wchars"
```

i think the headers is conflict with u++ header ,how to solve it?
