In my skylark web server app i use mysql server to store data.
the SqlSession didn't have method such as "IsConnected()" so i can not hold the session
and have no choice but to connect to the server every time :blush:

Hi akabee,

There is IsOpen() method that probably does exactly what you expected from IsConnected().
Check the docs ;)

Best regards,
Honza

You can use global SQL and SQLR and connect to your database when skylark threads are
created (just once when your program starts)

Take a look at skylark tutorial - 9. Connecting SQL database
