Subject: Theide (feature): closing openend files when changing package

Hello,

I believe it is dangerous to continue leave opened the files of an old package when a new one has been selected.
When a new package is created or opened, I would like that all tab/files that do not refer to the new one should be closed inconditionately.

In fact, sometimes working with a different version of the same package (same name of the files), I continued to type and modifies the file of the package that was already closed. I do not know if I am the only one doing this silly mistake.

However I do not see any good reason to leave opened the files that no longer are in use in the new selected package. Who is interested in them can open a part.

Thanks,
Luigi

Hello,

I agree with you - we should work towards better main package separation. We do not forget about your issue and it is tracked as #1518.

Sincerely,
Klugier
