In the source i see

```
INI_INT(threads, 3 * CPU_Cores() + 1, "Number of threads in each Skylark subprocess");
```

My skylark server always works well, but today i found it can not connect,
i go into the remote destop found that there are 10 TCP connections ESTABLISHED,
Is the number of threads too small to handle so many connection ?

How many cores do you have? (CPU_Cores)

Is it Linux server?

Mirek

It is Windows server,2 cores.
and this occurred randomly , :blush:
