Subject: [BUG] GUI issue when importing build method

---

I'm having a GUI issue when importing build methods using nightly build of theide.

Steps to reproduce:

1. Start theide
2. Load a project (like for example "AnimatedHello")
3. Go to Menu: "Settings->Build methods.."
4. Right click in the leftmost "Method" area, select "Import"
5. Choose a .bm file in the file dialog (I've tried several, seems not to influence the error, contents of the one that exhibits the issue for me is included below (why only one attached file pr. message?))
6. Click "Open"

After importing the .bm file the BM list is being populated with duplicate copies of the already existing build methods in addition to the newly imported one. Obviously when trying to "OK" this situation a sanity check fails reporting "Duplicate method". Here is a screenshot of the UI at this point;

However, after canceling this locked situation in the build method and reentering the dialog, everything seems fine. Only one of each build method is present including the imported one and they can be used for building.

System information

I'm using upp-nightly ppa on Ubuntu 15.10 and have just updated to this night's packages.

```
$ dpkg -s upp theide
```

```
Package: upp
```

```
Status: install ok installed
```

```
Priority: optional
```

```
Section: devel
```

```
Installed-Size: 182110
```

```
Maintainer: Jan Dolinar <dolik.rce@seznam.cz>
```

```
Architecture: all
```

```
Version: 10137-1~wily0
```

```
Depends: theide, g++ (= 4.1) | g++ (>= 4.3), libx11-dev (>= 1.0.0), libxft-dev (>= 2.1.8), libpng12-dev (>= 1.2.8), libbz2-dev, libgtk2.0-dev (>= 2.8.17), libnotify-dev
```

```
Description: C++ library for cross-platform development
```

```
Ultimate++ is a radical and innovative GUI toolkit whose number one priority is programmer productivity. C++ is a great programming language but
```

```
C++ programmers are sometimes hampered by the lack of effective libraries.
```

U++ libraries enable genuine productivity gains with shorter development times and greatly reduced application source code size.

GCC\_i586.bm

(this is a BM for attempting to cross compile to a Yocto built embedded system, linking doesn't work for me yet, seems like theide uses some hardcoded linking options to crt\*.o files which can't be found using this current BM, I might open a separate topic for this if I get stuck or find issues)

```
BUILDER = "GCC";  
COMPILER = "i586-poky-linux-g++";

Hello,

It should be fixed - for revision 10166 and above. Can you test it? Of course, thanks for reporting this bug.

Please notice that you can force several other issue when importing method. I found that when you import method is permanent it means that when you click canceled button - it still be in method list. However you can remove it by delete row in array. So, it should be less paint full that bug you described here.

When you verified this bug - please change title to [FIXED] or something like that.

Here is link to github commit:

<https://github.com/ultimatepp/mirror/commit/c29ff45676d6d0b87611641a520e3c808fea82e6>.

Sincerely and thanks,  
Klugier
