Esc: how to use recursion?

If I use a function name from inside to call itself, it doesn't work for me...

"self(arg1)"? - no success... Any tricks?

It should work. Well, one thing - there is a limit on recursion depth (50 stack frames).

There is also a limit number of total EscValue values existing at one moment (one milion).  
Breaking those limits ends in "out of memory" errors.

Mirek

Yes, it works. I think the problem was related to global vars "declarations"...
