Subject: Which widget can show text with fixed font?

Hello,

now I need to display the output of my application. I've already saved many txt file (the default of my app). It is important that the vertical alignment be preserved. So courier font or something fixed would be OK. For the moment I would be very happy if I could send it in a widget that can show it. Later I'll learn QTF to produce professional look and modify the output.
Which widget can I use for this purpose? I tried UWord and the result was terrible because it eat all the '\n'.

Luigi
