Subject: Language thTH added in .t file generates an error

I used theIDE to add a language to the .t file as 'thTH'.
However the compiler generates an error:

error: use of undeclared identifier 'thTH'

'thTH' for Thai (Thailand).

We are running on Linux Mint with U++ upp-x11-src-9604 snapshot.

Core/t.h is missing an entry for thTH

I've added the line in t.h as follows:

#define thTH(text) { LNGC_('T','H','T','H', CHARSET_UTF8), text },

This corrected the compile time error for me.

Can someone verify that this is the correct fix and include it in U++ ?

Thanks,
-- Jeff
