I am required to add msMY as a language to our application.

TheIDE does not have that language selection.
How can I add this language?

We are running on Linux Mint with upp-x11-src-9604 snapshot.

Actually, the language was not missing from the selector -- my error.

However, once msMY was selected, there was a compilation error.

It turns out that Core/t.h file is missing that entry.
I fixed my local copy by adding the following line:

#define msMY(text) { LNGC_('M','S','M','Y', CHARSET_UTF8), text },

This resolved the msMY issue for me.

Please verify and add to U++ source.
