I haven't done this in sqlite, but in postgres and it was quite easy:

Saving image to database:

```
//Database.sch
TABLE_ (TABLE_NAME)
SERIAL_ (SOME_ID) PRIMARY_KEY
BLOB_ (COLUMN_NAME)
END_TABLE

//code
Image img;

JPGEncoder jpg(90);
try{
 SQL & SqlInsert(TABLE_NAME)
  (COLUMN_NAME, SqlBinary(jpg.SaveString(img)))
}catch...
```

Loading it back:

```
try{
 SQL & SqlSelect(COLUMN_NAME).From(TABLE_NAME).Where(......).Limit(1);
 if (SQL.Fetch()){
  Image img = StreamRaster::LoadStringAny(SQL[COLUMN_NAME]);
  //Use StaticImage to show your image on a screen
 }
}catch....
```
