Subject: HttpRequest issue
Posted by akebee on Thu, 22 Sep 2016 09:10:10 GMT

Here is my code, the request may often blocking all the time even if i set the ReqeusetTimeOut to 30 seconds.
How can i set the timeout to prevent request blocking? :?

```
HttpRequest req(url);
req.RequestTimeout(30 * 1000);
req.Execute();
```

Well, too little details provided I am afraid...

Can you please provide info about OS (Linux/Win32) and, ideally, some url where timeout fails?

Mirek

hi, i found that it is because i built it in Visual Studio,for some reason i move all of the Core package to Visual Studio.
when i change back to TheIDE the HttpRequest returned to normal. :)
now i am not dare to use U++ in Visual Studio...

Interesting.

How have you "moved" it?

Were you using Core/SSL?

I simply copy all of the Core files,and add into vs project,
i am using Core/SSL but the url is not https.

There also a problem in theIDE , only in DEBUG mode it shows

error C2208: "boost::asio::detail::winsock_init<2,0>" no members defined using this type.

that`s why i choose Visual Studio at the beginning.
I think some header files conflict with boost::aiso in TheIDE ,but i dont know how to solve it.
