With the designer some times I experience problems that provoke the crash of the program. Then I've observed that removing some child from the graphic layout and inserting it directly in the class with Add(ctrl), and setting all its properties, the application works. The last case appeared with line edit just now. Please consider the following layout:

```
LAYOUT(VegaTab4Layout, 712, 496)
ITEM(LabelBox, dv___0, SetLabel(t_("View")).LeftPosZ(32, 644).TopPosZ(376, 80))
ITEM(Button, dv___1, LeftPosZ(484, 68).TopPosZ(424, 19))
ITEM(Button, dv___2, LeftPosZ(48, 68).TopPosZ(424, 19))
ITEM(Button, dv___3, LeftPosZ(156, 68).TopPosZ(424, 19))
ITEM(Button, dv___4, LeftPosZ(272, 68).TopPosZ(424, 19))
ITEM(Button, dv___5, LeftPosZ(380, 68).TopPosZ(424, 19))
ITEM(Button, dv___6, LeftPosZ(588, 68).TopPosZ(424, 19))
ITEM(Button, dv___7, LeftPosZ(484, 68).TopPosZ(396, 19))
ITEM(Button, dv___8, LeftPosZ(48, 68).TopPosZ(396, 19))
ITEM(Button, dv___9, LeftPosZ(156, 68).TopPosZ(396, 19))
ITEM(Button, dv___10, LeftPosZ(272, 68).TopPosZ(396, 19))
ITEM(Button, dv___11, LeftPosZ(380, 68).TopPosZ(396, 19))
ITEM(Button, dv___12, LeftPosZ(588, 68).TopPosZ(396, 19))
ITEM(LineEdit, linedit, LeftPosZ(32, 644).TopPosZ(20, 348))
END_LAYOUT
```

with constructor:

```
VegaTab4::VegaTab4()
```

```
{
  CtrlLayout(*this);
  SizePos();
}
```

provocate the immediate crash of the application. To resolve the problem I need (all other being the same) to delete the line

```
ITEM(LineEdit, linedit, LeftPosZ(32, 644).TopPosZ(20, 348))
```

and use the following constructor

```
[/code]
```

and the following constructor

```
VegaTab4::VegaTab4()
{
  CtrlLayout(*this);
  SizePos();
  Add(linedit); // code of the previous deleted row
  linedit.LeftPosZ(32, 644).TopPosZ(20, 348);
}
```

where I've declared "LineEdit lineedit;" in the class declaration.
Is it normal?

Luigi

No, but I see no reason. Could you get testing package posted?

Mirek

No, but I see no reason. Could you get testing package posted?

Mirek

I can of course...

Just now I removed my modifications to reproduce the anomalous behaviour before to post the package... and it decided to work as it should do!

Maybe it was afraid of you?

I can assure that before to signal it I tried many times. Well, in future I'll freeze the package with the problem and start to work with another one.

So I think now make no sense to post it but if you think can be useful just tell me.

Luigi
