How do I cut file to the clipboard?

I can copy and paste file to the clipboard.

However,I can not cut file.

Source code of copy/paste

```
void Copy(String path)
{
      if(Upp::FileExists(path().ToStd().c_str()))
      {
        ClearClipboard();
        VectorMap<String, ClipData> data;
  Vector<String> files;
        files.Set(0,path));
  Upp::AppendFiles(data,files);
        Upp::AppendClipboard(data);
      }
      else
      {
  PromptOK(t_("Copy Error"));
      }
}

void Paste(String path)
{
 PasteClip& clip = Ctrl::Clipboard();
 PromptOK(clip.GetFormat());
 if(Upp::AcceptFiles(clip))
 {
  if(GetFiles(clip).GetCount()>=1)
  {
   String file = Upp::GetFiles(clip).At(0);
   if(Upp::GetFileExt(path)!="")
   {
    if(!Upp::FileCopy(file,Upp::GetFileDirectory(path)+Upp::GetFileName(file)))
    {
      PromptOK(t_("Paste Error"));
    }
   }
   else
   {
```

```
    if(!Upp::FileCopy(file,path+"\\"+Upp::GetFileName(file)))
                            {
                PromptOK(t_("Paste Error"));

     }
    }
   }
   else
   {
    PromptOK(t_("Paste Error"));
   }
  }
  else
  {
     PromptOK(t_("Paste Error"));
  }

}
```

That is actually pretty interesting issue

I understand your question as "how could I reproduce windows shell behavior where Ctrl+X on file makes it 'gray' and eventual paste will remove it from the original location", right?
