PromptOK(GetCurrentDirectory());

Show -> 0:dscoutdscMSC15.Debug.Debug Full.Gui.Mt

Need -> o:\dsc\out\dsc\MSC15.Debug.Debug_Full.Gui.Mt\

whats prolem?

I suppose PromptOk takes the string as RichText (QTF)?

Funnily enough, I tried to find in Documentation both PromptOK to verify what String it expects, and also RichText/QTF to see how to escape the QTF from non-QTF string... and neither is possible to find.

Only after using google few times I found nice example exactly for your case, but in SelectFile example.

http://www.ultimatepp.org/reference$SelectFile$en-us.html

    PromptOK(DeQtf(SelectFileOpen("Text files\t*.txt\nAll files\t*.*")));

Hello,

I decided to add that documentation - we should have at least provide simply information about dialogs. Documentation should be available tomorrow - I will provide link to it. In package form it should be available from 10288.

More information - coming soon. Now I can post url to GitHub commit:
- https://github.com/ultimatepp/mirror/commit/889a4e26476f1cd0 913173ef8141d39d543b1099

Sincerely,
Klugier

Hello,

Just small info. As mention yesterday - documentation is now available on the site. All substantive comments are welcome. Of course I mention about DeQtf function to avoid problems in the future.

Sincerely,
Klugier
