1) What are the minimum hardware and software requirements for operating U++ and TheIDE?
What platforms does TheIDE RUN on?
(e.g., Windows XP?, Win7?, Vista?, Win 2000?, Win9x?, RH Linux(which versions)?, Ubuntu?, CentOS?, Debian?, Fedora?, Mac?, Irix?, unix?, VMS?...)and how much are the minimal and min recommended RAM, HD space, and processor requirements to install and run TheIDE?

Does it require any additional software (e.g., OpenGL?)

2) What target platforms does U++ support for its products to build and RUN on(same list of OS's)?

(Though Win, Linux, and Ubuntu are mentioned, I can't find any further specifics on the website.)

Hello,

1) We do not provide any information about system requirements. OpenGL is not needed for TheIDE - it is only required when you want to write your own application that use 3D graphics.

2) Sometimes ago I wrote article about supported platforms. (It can be found on our main page - Users).

If you have any ideas about improvements in above article - I will be welcome.

Sincerely,
Klugier
