simmxtools v0.2:

some usefull stuff, usage:

- simmxtools -help

- simmxtools <=will read config.txt

- simmxtool "keywords", eg: simmxtools "msgbox:'hola'" or simmxtools "run:'cmd /c

notepad\nplacewindow:'notepad',1,2000" <= will wait for notepad start max 2sec

- try this: simmxtools "msgbox:'hola from simmx tools!\nmsgbox:'new line'\nrun:'cmd /c notepad\nshowwindow:'notepad',9,1000\nplacewindow:'notepad',0\nsleep:1400\nplacewindow:'notepad',5\nsleep:1400\nplacewindow:'notepad',1\nsendkeys:'hello{SPACE}from{SPACE}simmx{SPACE}tools!{RETURN}'\nsendkeys:'{RETURN}1234567'\nsendkeys:'{BACK}{BACK}'\nsendkeys:'{SPACE}'\nsendkeys:'6789'\nsendkeys:'{LMENU}'\nsendkeys:'{DOWN}{LEFT}{LEFT}'\nsendkeys:'{UP}{RETURN}'"

This tool was created primarily, because wxp for some reason does not always

remember cmd window position - even when it explicitly asks you if you want to save for future usage.

plug can be created simply with regular dll(named plug_anyname.dll), 2 functions must be defined:

- INT32 plugInitKeywords(char **ptrtokeywordsnullterm)

- INT32 plugOnKeyword(DWORD keywind,DWORD numArgs,Pgn pgn,Pgs pgs,Pgr pgr,Psr psr,pluginter &pi)

If there are clashes from two -same name- keyword in two separate dlls, prog will warn you

known bug:

- upp version of dll sample crashes, even on simple call PromptOK("str");

- msgbox:'text ',-16.6,' more text' won't print correct double(just1stPart)

updates(legend: :modified, +added, *fix/todo):

@10.dec.2016>

:\$res is used in place of previous \$lastres(oldPlugRes/oldRunWait) <=this is thrown out, use \$res to acces it

:if/while - some bugs fixed

+if - now optionally only leftmost var can be used, eg: if:'\$dbl' or if:'\$str'

+break/continue [numNestedLevels=def=1], eg: innermost 'break:3' will break out to 2nd while, where there are 4 nested while's

the best would be to use named while, and specify break/continue to break/continue to - since now if code is later changed/modified,

break 3(forExample) may go out of sync - for now prog will warn you if you do for example: break 10, where there are only 2 nested while's

Added tests in config-all.txt

+\$line - to access current line - 1based - as number

+msgboxtitle keyword eg: msgboxtitle:'title',"regular msgboxtitle has "&b,' chars'

*escapes \, \$\$ don't work yet, so you can't do this yet, eg: 'text\$\$idno' or 'text\nstring', but you

can 'text\$', 'idno' and 'text\','nstring'

Tool is also available here:

v0.3

Added stuff, check note.txt,
one of it is the possibility for total commander 'transparent' usage of files,
whether they are packed or unpacked - that is; zipped 'current' contents files can be accessed by
any tool,
something like total commander UnpackAllAndExecute - but you get pathAndFile to temp
folder/file that
was created transparently - sample included in next post.

Command line params added:

-file param added to simmxtools, use: simmxtools -file somescript.txt or simmxtools -file
somescript.smx

-args param added to simmxtools, eg(-args thearg1 thearg2), using at end - marks all next args as
passed 'arg',

access as '\$arg1', '\$arg2' etc, \$nclargs as numCmdLineArgs
check note.txt for more.

Total commander unpacker - xul viewer sample is available in next post.

Tool is also available here:
<https://ws-tools.000webhostapp.com/>
and here: simmxtools gmx

v0.4qxr

QBoxDrawers added/modified for easy option creation
QBoxEdit added - simple editor, you can do this in it: --goto23 or --simmxtools "print:'holla'"
QBoxFile added - regular text or QTF-format, explanation in QTF-Format.html, basic build-in icon
names in note.txt
Note: qboxfile is now qboxfiledrawers
Demo added

Wm-message-list.txt added for send/post message usage, like
postmessage:'notepad','wm_settext',0,'holla'
or for dialog reference like so: run:"cmd /c simmxtools 'showmsgswnd'"

@23.dec.2016 v0.4qxr:

Note:3xqbox stuff:qboxfile qboxfileedit qboxfiledrawers, qboxfile is now qboxfiledrawers

+qboxfile:'textfile.any'(mayBeUtf8)[,number(asqtf,def=0)][,str(title,def="simmxtools")][,str(prependT
ext="")]

+qboxfileedit:'textfile.any'(mayBeUtf8) <=simple editor-press f1 for more
:qboxfiledrawers:'file'[,number(structAlignment,def=4)] - bug fixed - sample added
'qboxdrawers.txt',

just write in some script: qboxfiledrawers:'qboxdrawers.txt' <=change options, then press OK -
qboxdrawers.dat should

be created - next time it'll be loaded from this
note, any compiler can read this byte data struct as long as it can define
struct->readDatFileIntolt

note, def=4byte alignment, whereas compiler default is usually 8byte
alignment(changeCompilerTo4-orModifyThis),
as 2ndParm you can modify this

Tool is also available here:
<https://ws-tools.000webhostapp.com/>

Modified qboxfile with qtf param
so qboxfile can be used to view help like stuff with qtf format, etc

-some bug fixes QBox unicode/utf-8 stuff..., qboxedit added insfile/insfiles/fullscreen
-qtfedit added with optional param to open qtf or rtf file - which may be exported to html/rtf, added in demo
-placewindow now has optional params for width/height +width=inPercent,-width=inPixels, same for height, added in demo
