Because we want to print in a batch (with and without GUI) we have added some feature to PrinterJob.

Is this the right place? What do you mean?

and here our patchfiles -> current release 2015.2 (rev 9251):

Thank you very much, good to hear.

We would like to publish AIBRichEdit in Bazaar. But AIBRichEdit is based on several extensions to RichEdit, RichText. It would therefore not be usable in this form. Therefore, I would like to first clarify whether these extensions are meaningful and good, or whether there would be a better solution approach and we should make a rebuild here.

Should I continue to present the individual solutions as under

AIBRichEdit -> RichObjectType: enable/disable resize feature AIBRichEdit -> RichEdit: Preview image at insert image AIBRichEdit -> CtrlCore\ParseRTF.cpp read token "line" and "MERGEFIELD"

Or should I publish the next solutions in this forum (U++ Developers corner)?

The next feature (display multiple slides) is complex to extract.

However, I suspect the greatest discussion. I believe this would be better done here in the DEVELOPER CORNER, even though we currently have a ready-made solution for this.

How should I proceed?

Best wishes and a good, successful, peaceful 2017

I think for the moment: What about different namespace?

I plan to review and merge your changes into RichEdit, but that will take time. For now, maybe putting all into different namespace would be good...
