Hello all

Trying to compile reference/OpenGL in Windows, a couple of problems avoided it:

- CtrlLib is not included
- GLCtrl for MinGW wants to link with "glaux"

Just by including CtrlLib in reference/OpenGL and removing glaux in GLCtrl package, both in MinGW and MSC the demo compiles and runs perfectly.

@koldo Thanks, I would not have found by myself. Note: I have removed "glaux" via menu "Project\Package organizer..", where are your screenshots come from ?

@mirek You've written "fixed". Where can I find the version of u++ you fixed ?

Hello,

This patch is not on the trunk. Take a look at .upp file of GLCtrl (<https://github.com/ultimatepp/mirror/blob/master/uppsrc/GLCtrl/GLCtrl.upp>):

uses

CtrlCore; // No CtrlLib dependency

library(WIN32 GCC) "glaux glu32 opengl32";

library(LINUX | BSD) "GL GLU";

library((LINUX | BSD) & !X11 & !NOGTK) "gdkglext-x11-1.0 gtkglext-x11-1.0";

file

GLCtrl.h,

GLPicking.cpp,

Win32GLCtrl.cpp,

X11GLCtrl.cpp,

GtkGLCtrl.cpp,

GLCtrl.cpp;

Anyway, this is not the problem here. OpenGL was working without CtrlLib for the long time. I believe the latest Core modification causes the CtrlLib dependency on the linking level. Mirek have you got any suspicion in this area?

Sincerely,
Klugier
