[View Forum Message](#) <> [Reply to Message](#)

Part 2 is here:

just unzip it to same dir where executable is

In next/prev post there is also an updated version

of simmxhdrtools.js, which can be used as an standalone tool - with internal demo

File Attachments

[View Forum Message](#) <> [Reply to Message](#)

Updated simmxhdrtools.js,

just rewrite previous version.

For more info of this tool just dblClick it or if wscript is

somehow 'broken' try with wscript simmxhdrtools.js,

at the end there should be a switch how to use demo - if everything is ok, it'll create 2files

Updated version,
part1 is here, part2 is in next/prev post!
File note.txt has more info.

Screenshots:

Site1: <https://c.gmx.com/luoganda@gmx.com/Eii2cjNMSx2mypdka7gRHQ>

Site2: <http://ws-tools.000webhostapp.com/toolz/screenshots/SUniGuiCreator/> <=fullResolution

HaXe flash sample:

- install haxe, then in tools\haxe-flash.bat modify path to it
- in SUniGuiCreator:
 - browserVer(open MainSwf.hx.all then sample.gfx and hit Export(hold down Shift while pressing OK, or dont
 - and see if MainSwf gets executed-justCloseIfItRuns), then open index-haxe-swf.html.all) and hit Export
 - flashPlayerVer-ifYouHaveFPlayerTool-orDefaultSwfOpener(open MainSwf.hx.all and sample.gfx) and hit Export

Html sample:

- open index5.html.all and sample.gfx, then hit Export - it should produce similar effect to upper haXe flash

Updated version:

- some bug fixes
- a few things added, chk Help/About

Graphics files are not! compatible with previous versions

Default window pos/size is now top/left corner - filled height - width is 80% of screen size, this can be ignored with switch described in About dialog!

Part2 is in next/prev post!

Spaces in directories fixed,
so if you have it in "Program Files", tools should work now!
although for files spaces are not allowed for easier access

Updated:

- some bug fixes, known: on non-wxp when f2 is re-used, it doesn't reposition gfx window right
- few things added - chk Help/About/Vector? controls,
like regex for search in editor - type --help'Enter' for more

Part2 is in next/prev post!

BugFixes:

@tool ...; properly working params

properly get ui objid/clsid, like gfxget,... etc

win7 - properly set window size when switching with F2(toggle ui) - i didn't test this on xp though
faster gfx window redrawing(ztBug)

... etc ...

2knownBugs to go

Added:

native windows snippets(sample template): demo added through wnative.cpp.all/wnative.gfx

exportOnlySample: demo added in zz_zexp folder - setPathToGcc and dbclick

export-and-compile.bat

customizableDesignModeButtons: now usertools can be switched through

this(sample-clickOn1st2ndDmButton-blue/red)

more esc script functions added

...

For more check note.txt

Part2 is in next/prev post...

bug:
clicking gfx item, then RMBButton->SetVectorChild
now correctly handles direct Ctrl_1,...

+added upp toolbar sample:
edit: open upp-toolbars2.h.all
gfx: open upp-toolbars.gfx(maybeThereWillBeSomeInfoErrorsForNow)
click Export, then upp-toolbars2.h should be in there,
note that exported file directory can be changed in settings!
codeThatUsesItIsIn: snippets/cpp/upp/separateFile/SUGCToolbarTest-exp.7z

+added plugins:
basic functionality for setting gfx item properties,
interIconSelect as an example, check note.txt and tools/plugins,
compiler used for that only needs printf like fn(basics) to output to stdout.
Added gfxwnd... esc functions for using them

+added internal images: some interImages are available for image path(directName),
check ui Vector controls? and tools/plugins/iconInterSelect_icons.jpg

+added esc keyword to anytool.tool:
which may be used to run esc script from any tool(button)

+added insertNamesOnly on gui Snippets when Alt+Shift+'<=>...' click
to insert all appropriate(no -exp.*) codeFileNames from that folder
check help button

+added export to different directory:
also added to exportOnly, check about

part2 is in next/prev post!

toolButtons:

- added ability for toolButton images iml/file, tooltip option instead of button text
- added ability to toolButton item to enable/disable it
- added qtf-format ability for toolButton

added some macro support:

- check tools/usertools/ut-sample-tools.tool and ut-sample-macro.tool
- To test, just click black toolButton, which has a tooltip and rbuttonClickOption

there is a tool/images folder now

- eg for toolButton's images etc
- added some more internal images
- check tools/images/Ctrlslmg.jpg and inter-simxmimg.jpg

added QTF-Format.html as doc
and of course note.txt updated

Posted by [luoganda](#) on Sun, 17 Dec 2017 18:43:14 GMT
[View Forum Message](#) <> [Reply to Message](#)

part2 is in next/prev post!

Added sample for simple upp menu - chk down.

bugs:

gfxBackClr-onLoad Cannot load image, multiSelect moving with keys delayed info, F4 afterCreation bugs,
deletingObjs glued were not free'd, gluedObjs now works properly, MouseRClick can now directly select item

gfxObjs:

now when setting properties, all selected are modified, previously only cmdCtrl used that added:
editor tabs'n colors'n tab/font size, `$<esc{(p1=22,p2=3.14,p3="anystr")return ""}>` parameters to pass

to escFile added - demo too(esc-params-call.txt.all),

added:

2ndPassParse added to support `$<esc..> @...` in them before they are called
anyfile.esc //opt=noParse! optional at 1st line added to notParse `@...` in script but to optionally pass `@...` with return to main parsing func and parsing it there - usefull to return any `@...`,
`@tid-str "title"` which is optional - added

added:

abbreviations(configFileToltToo), eg: `---class(or...class)'[Ctrl-]Enter'` - check
snippets/abbrev-exp.esc, snippets/cpp/abbrev-exp.esc, and sample how to use them
with esc in esc-params-call.txt.all

added:

Zoom/offset for gfx window - check Vector? controlS - MMBButton can also be used

added(uppMenu):

Check snippets/cpp/upp/SUGCMenuToolbarTest-ign.7z for already created menu with it.
To manually see how it works: open menu-generic.gfx and upp-menubar2.h.all then Export.
It should produce upp-menubar2.h header file - can be redirected to some folder(drawers cfg).

AltShift+SnippetClick: on '`<=>...`' adds fileNameOnly,
while clicking on file edit's it - doc'ed in Help.

InEditor :> (whenWaitingForOutput) is buggy

Posted by [luoganda](#) on Mon, 18 Dec 2017 14:28:24 GMT
[View Forum Message](#) <> [Reply to Message](#)

This is a patch,
for download version look previous post!

Some cosmetics and some bug fixed, like:
-gfx F4 and Ctrl-F now properly "copies" all props!
eg for id/class images etc

In original "download" version there is an empty
directory in snippets/cpp/upp... which can be deleted.

Also, delete(ifExist) SUniGuiCreator.cfg to see patched cosmetics.

Patch2::
-plugin should now work if in dir with space, eg: Program Files
-some cosmetics fixed
wholeVersion can be downloaded from:
[https://c\(-dot-\)gmx\(-dot-\)com/luoganda@gmx\(-dot-\)com/YJTUF-A7STGlqsg4w513TQ](https://c(-dot-)gmx(-dot-)com/luoganda@gmx(-dot-)com/YJTUF-A7STGlqsg4w513TQ)

Posted by [luoganda](#) on Thu, 12 Apr 2018 19:43:51 GMT
[View Forum Message](#) <> [Reply to Message](#)

Updated version,
part1 is here, part2 part3 is in next/prev post!
File note.txt has more info.

Quite some stuff,
+inter plugins support(Ctrl-p=plugPanel,Alt-0/Alt-1=samples)
+note.txt can be opened inside app by plugin(sample code added)
+qtf/rtf support with simple html export(samples added)
+added esc functions
+script-startapp.all.sample/script-endapp.all.sample - rename to see how it works
+all samples/help/code updated

InEditor :> (whenWaitingForOutput) is buggy
and going fullscreen(with plugins) is buggy because underlying windows are destroyed
on wXP clicking note in main menu produces an error when no file is opened yet:
..fixed(patch3):for some reason calling UpdateWindow(in one of sb... funcs) in plugin produced an error
Editor's richedit still set IsModified somewhere(asks to save even if not modified)

Start completely afresh, don't just override previous version!

Full - updated version,
part1 is here, part2 and patches are in next/prev post!

Some fixes/addedCode:

- +prj/ses: updated - gcc/watcom(v2)/msvc/cmake+ninja samples added! maybe uncheck 1stOpt in config for this
- +bugFixes and clearing of .tool files - 'ut-default-tools.tool' has more or less all the info
- +plugins: added IsModified and sample code for it(SUGCPluginNativeModify) - can be compiled with regularCompile.all
- +dirs with spaces may now work - this was more or less cmd /c quoting misunderstanding

File note.txt has more info(mayAlsoBeOpenedVia:F1(orMainMenu)->note(Shift-inEditMode)).

InEditor :> (whenWaitingForOutput) is buggy
and going fullscreen(with plugins) is buggy because underlying windows are destroyed
Editor's richedit still set IsModified somewhere(asks to save even if not modified)

Start completely afresh, don't just override previous version!

just rewrite previous files with this.

Added/modified:

- +quotes in 'compile-gcc.bat' fixed - 'sampleBat.prj' should now compile just fine

For more tools check out:

<http://ws-tools.000webhostapp.com>

...patch-3.2 is here,
A patch-only for ver 23.may.2018 patch 3.1

check previous post for more info !!

just rewrite previous files with this at 'tools/usertools'.

Added/modified:

+regression: that gray button(multitools) tool produced a bug in 'txtWriteDone' because focus switch was not done from gfx to txt with 'txttab'

Full - updated preview version,

part1 is here, part2, part3 and any patches are in next/prev post!

Some fixes/addedCode:

- * projects now have separate included/opened files(small add/remove dlg), extensions can be specified in *.tool
- * there is now output window for project which use compilation and clicking on possible file/line error via plugin
- * rtf/qt4 bullet reOpen indentation bug fixed thanks to mirek and underlying code

This is previewVer, but basic things are there, so jet to polish:

-outputWindowPlugin: ascii only, should use at least wchar_t, mainly not because of no wide regex

-sorting files in project dialog, for now - prj/ses files can be manually edited via editor

-basic compilation works, CMake and others not checked

InEditor :> (whenWaitingForOutput) is buggy

and going fullscreen(with plugins) is buggy because underlying windows are destroyed

Editor's richedit still set IsModified somewhere(asks to save even if not modified)

Start completely afresh, don't just override previous version!

This is a patch!
For more look at previous posts!

Some fixes/addedCode:

- * regression: that gray button as macro now works
- * project dialog polished a little: can sort files with Ctrl-Up/Down
- * project dialog polished a little: can reOpen files in manually sorted order
- * project: current edit file can now be added. Or with Shift:allOpenedFiles or with Alt:gfxFile

Yet to do:
-undo in gfx

This is a patch!
Check previous posts for more!

Some fixes/addedCode:

- * winXp: output newline bug
- * comport interPlugin updated - also 0 terminating reading added and to view as hex-8/16
- * rewrite subst func to properly get whole strings of any gfx property - previous " bug in string
- * project dialog updated
- * exporting any suitable when project used by 'Export' button, optional main file(flagged) is called last
- * \$<childtab> prop added - check Help for more at Snippets section, setVectorChild direct name bug fixed
- * needed esc func added
- * BakeASite projects samples added, one with own script - which can also be used as a template for other prjs
- * ...

Yet to do:

- undo in gfx
- wideString output(does std:: support wideRe?), mainly if nonAnsi characters used in a path

This is a patch - so download full 8.feb.2019 ver,
extract into some directory eg SUniGuiCreator, download and apply all patches, then download this one also and overwrite it's base directory with this.

Some fixes/added code:

- * comport right edit output fixed(previously one could not write into it,paste worked). If there are multipleLines, backspace is still wacked, but as it seem multiline doesn't work quite well - but it may come handy in future.
- * DDS Function Generator added(viaUSBToSerial): sample code for Fy6900 - one can check how it looks/works without this device.

Yet to do:

- undo in gfx
- wideString output(does std:: support wideRe?), mainly if nonAnsi characters used in a path

This is a patch - so download full 8.feb.2019 ver,
extract into some directory eg SUniGuiCreator, download and apply all patches, then download
this one also and overwrite it's base directory with this.

Some fixes/added code:

- * Sample.prj file header hint corrected
- * Added User Interaction for gfxItems - basic escScriptCommands are there - eg to create custom gauges frontend/etc.

This can be added by Menu->Graphics-script(Shift clearsIt) and it's usage is saved with optional projects/sessions.

Sample is ui-items-test.esc and key info is in escScriptKeycodes.txt.

Note.txt is updated to reflect this changes.

Yet to do:

-undo in gfx

-wideString output(does std:: support wideRe?), mainly if nonAnsi characters used in a path

This is a patch - so download full 8.feb.2019 ver,
extract into some directory eg SUniGuiCreator(no white spaces for now), download and apply all
patches, then download this one also and overwrite it's base directory with this.

Fixed:

- * snippet: cpp/windows/ab_ui-create.esc
- * sample.prj: both dirs at zz_smx/cmakeninja/.. files must be included in prj for CMakeNFile.
- * menu -> Generate CMakeNFile had a bug which didn't include project file(s),
now - one can specify tid-prjeflist: "cpp hpp" or excluding files with "!txt nfo" - check help below
about in ui.

I didn't test if exported CMakeLists.txt compilation works correctly - but probably yes.
Template for it is in tools/CMakeLists.txt.all

Added:

- * Menu -> CloseAll <= to close any open project/session/editor/gfx.
- * Note.txt updated: 'Using own graphics on ui-items as widgets'.

Program dir should have read/write privileges to work correctly!
Also for dragging/saving customizable right ui-buttons around with alt-rmouse.

Yet to do:

- undo in gfx
- wideString output(does std:: support wideRe?), mainly if nonAnsi characters used in a path

[View Forum Message](#) <> [Reply to Message](#)

Extract into some directory with writePermissions eg SUniGuiCreator(no white spaces for now)
and run!

SUniGuiCreator is mostly meant as a tiny tool for sdk-s without own gui creator(eg haXe,html,...),
although it could be used as an front-end for audio effects or other things since basic ui-draw
things are there(check Note - using own graphics).

(comport is eg integrated, sample Fy6900 signal generator cmds are there - but not fully tested)

Added html5-canvas:

there are two different approach files, so - open program:
Select top open(editorFile) zz_smx\index5-canvas.html.all and

then open bottom(it's associated gfxFile) zz_smx\index5-canvas.gfx and hit F12 ExpCode.
Your default webbrowser should open tiny sample.
Then one can do the same and open 2nd sample - steps like above but with index5-canvas-2.

3rd button can be clicked in Design mode(topleft) for html-canvas tools,
for now only two(tools/usertools/ut-html5canvas-1.tool, and ut-html5canvas-2.tool),
but this are meant just as example - user should make their own(same goes for most tools in SUniGuiCreator).

With canvas thing added, a simple 2D html5-canvas game could probably be created!

Bugs(yet-to-fix):

- * start parameters for exporting don't work properly(for now - just open ui and export)
- * Font settings don't initialize values with old ones - but new one are set for current item

Yet to do:

- undo in gfx
- wide/ansi-string output

SUniGuiCreator can be downloaded
from <http://ws-tools.000webhostapp.com>.
