Subject: umk on U++ server is obsolete and creates bad Makefiles

Hi

The current 'umk' binary on the server is not patched and it creates not thread safe Makefiles. Those Makefiles end up in all new snapshots and prevent building U++ with threads.
-> The command line tool 'umk' needs to be replaced by the new version in trunk head.

What I mean is that 'make -j8 -C uppsrc' will stop with errors because 'make prepare' is not called soon enough. This has been fixed in svn. Unfortunately, this new version is not installed on the server yet.

I don't know who is responsible of the U++ server so I post here.

And does anyone knows how to access those two files 'umk.1' and 'theide.1' on the server? I want to include those two files inside future snapshots (editing 'src' bash script for that) for more standard POSIX/X11 tarballs.

Updated. Now running nightly job to build tarballs.

Hi, and thank.

Before committing upp-devel.spec, I would like to know where I can find those two following files on the server.
From svn:
Quote:
trunk/uppbox/lpbuild2/umk.1
trunk/uppbox/lpbuild2/theide.1

I want to include them in future snapshots. For that I need to modify 'trunk/uppbox/Scripts/src', adding two lines:

cp -p wherever/uppbox/lpbuild2/umk.1 ~/upp.tmp/upp/

cp -p wherever/uppbox/lpbuild2/theide.1 ~/upp.tmp/upp/

but I don't know where they are.

From the win script I deducted that they are here: ~/upp.src/uppbox/lpbuild2/ but I would like to get a confirmation before modifying (and not breaking the src script.

Also, there is no full U++ license file in the snapshot tarballs. Just uppsrc/ide/Copying.

Shouldn't we create a full Copying file will all info from
http://www.ultimatepp.org/appideAbout$en-us.html?

Sorry to bother you with all my questions. :/

I want to include them in future snapshots.
I created those man pages for the same reason you need them now - to be placed in packages I think it would make sense if they were at the package where they belong. Mirek, what about moving those two files into uppsrc/umk and uppsrc/theide, respectively? It would simplify packaging for all unix platforms.

Best regards,
Honza

There copies in umk / ide now (did not dare to actually move them).

Mirek
